DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14 and 19-20, drawn to a compound 8 to 50 nucleobases in length targeted to a nucleic acid molecule encoding phospholipid scramblase 3, classified in class 536, subclass 24.5.
- II. Claims 15-18, drawn to a method of inhibiting the expression of phospholipid scramblase 3 in cells or tissues comprising contacting said cells or tissues with a compound of 8 to 50 nucleobases in length targeted to a nucleic acid encoding phospholipid scramblase 3, and methods of treating an animal having a disease or condition associated with phospholipid scramblase 3 comprising administering said 8 to 50 nucleobase compound, classified in class 514, subclass 44.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the compounds of invention I may be used in an *in vitro* assay for detecting the presence of a nucleic acid encoding phospholipid scramblase 3 in cells or tissues.

Art Unit: 1635

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Claims 1-20 are generic to a plurality of disclosed patentably distinct antisense oligonucleotides comprising a nucleotide sequence according to SEQ ID NO: 20, 21, 28-29, 39, 41-42, 47, 51, 56, 58-59, 63, and 77-79. Each of the antisense oligonucleotide sequences recited in the instant claims are considered to be structurally independent and distinct even though they each target the same gene, because each of these antisense oligonucleotide sequences have a unique nucleotide sequence and each targets a different and specific region of the gene. Furthermore, a search of all the antisense sequences recited in claim 3 presents an undue burden on the Patent and Trademark Office to search and examine all of the recited sequences.

5. In view of the foregoing, applicants are required to elect an invention from either group I or II, and furthermore must elect 1 (one) antisense oligonucleotide sequence from claim 3 to be searched with the elected invention. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
